Trans. of Akademiya Nauk SSSR. Doklady, 1961,
v. 138 [no. 1] p. 125-126.

DESCRIPTORS: *Ferrocenes, *Magnetic susceptibility,
Paramagnetic resonance, Polymers.

The static magnetic susceptibility was measured for
magnetic field intensities of 3500 to 4500 oersteds and
temperatures from 20 to 120°. These polymers are
paramagnetic. The closer the ferrocene residues are
to each other in the molecule, the greater is the para-
magnetism. The values of the specific magnetic sus-
ceptibility of these polymers obtained in solutions were
the same as those in measurements on solid polymers.
